

## Quick Start Tutorial

### Powering the Table on

1. Locate the **I/O** main power switch next to the power cable. Press the switch to the “**I**” position to turn on.
2. Locate the toggle switch on the side of the table. Lift the cover and toggle it once to the left. **Wait for the system to load.** Cover the toggle switch back to avoid accidentally turning the system off.
3. Open the **Table EDU** application.

### Powering the Table Off

1. The table runs on Windows. You can power it off as you would power off a Windows computer (**Start >Power>Shutdown**). An alternative to this method is to use the toggle switch. **Close all windows first**, and then pull the toggle switch once to the left. This will shut down the PC and put the monitors to sleep.
2. Wait for both monitors to give the **no signal** message before pressing the **I/O** main power switch into the “**O**” position.

### Taking Care of the Table

1. Power the table off, clean it with a dry rag, and cover it after use.
2. Do not place any objects on it.
3. Avoid liquids and food near it.
4. Do not sit on it.
5. Avoid items near it than can fall on the screen.
